

Elite

# Imperial

water conditioning agent

Premium performance made possible.

- ☑ The water in my tank mix doesn't have optimal ph levels.
- ☑ I'm looking for a water conditioner that is compatible with a broad range of herbicides.
- ☑ I need to make the most cost-efficient and effective spray application possible.

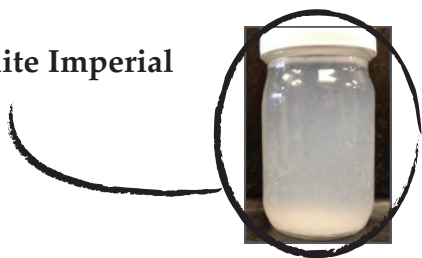

**Elite premium adjuvants are not one size fits all.  
If we just described your program, then you need Elite Imperial.**

Because the most overlooked component of a spray program is the water used for applications. The addition of a water conditioning agent promotes herbicide performance by modifying elements such as pH and hardness to ideal levels.

**Adding Elite Imperial to an herbicide application is guaranteed to improve the results.**

- o Conditions mixing water where water quality is a concern for optimum active ingredient performance.
- o Limits hard water ion interaction with active spray solution partners.
- o Offers compatibility with a broad range of herbicides.
- o Ensures water quality level for an economical application every time.
- o Provides an easy-to-use liquid formulation.
- o Offers cost-effective, low-use rate when compared to AMS and other water conditioners.
- o Works as effectively as 2.5 Gallons of ammonium sulfate (AMS) in tank mixes with glyphosate at weed control (using 4 pints of Elite Imperial).
- o Must use with compatible chemicals, check with your RRSI representative.

Before Elite Imperial

After Elite Imperial

Elite Imperial is brought to you by Red River Specialties, Inc., your premier provider of herbicides in the industrial, rights-of-way, aquatic, range and pasture, and forestry markets.
