Premium performance made possible.

As powerful as it sounds

Elite is the premium brand of adjuvants from Red River Specialties, Inc. Adding Elite to a spray application will enhance product performance. Each product in the all-inclusive Elite line consists of highly-specific features designed to work together with every herbicide treatments. What all Elite products have in common is a level of product quality that is guaranteed to improve the current results of any herbicide application.

Adjuvants are not one size fits all

Adjuvants are materials added to a formulation or spray solution to affect its physical properties and increase pesticide performance. Each product contains certain characteristics that perform unique functions during a pesticide application. It is critical to understand both the product and adjuvant labels in order to select the adjuvant best matched for the targeted problem, product used, spray site and application equipment.
Elite adjuvants are as individualized as treatment programs. When added to a spray application, each premium-quality Elite product delivers best possible results to maximize any herbicide application.

**NATURAL RED** is designed for basal-bark and cut-surface brush control applications with oil-soluble herbicides, such as triclopyr, that are registered for woody plant vegetation control. **NATURAL RED** contains an oil-soluble, long-lasting indicator dye. **NATURAL RED** can be used on industrial rights-of-way, forestry and other applications that require an oil diluent as a penetrant.

**CHAMPION** is a concentrated surfactant that is excellent in the forestry, rights of way, utility, aquatic, agriculture, and turf market. This proprietary blend is our usual choice for mixture with brush control herbicides, in particular glyphosate products.

**PREMIER** is a unique, highly emulsified low viscosity non-aromatic/noncarcinogenic diluent with select surface-active compounds and coupling agents. The low viscosity oils and other ingredients used in **PREMIER** are designed specifically for use in very cold temperatures and will perform and remain sprayable well below freezing. **PREMIER** is developed specifically for basal-bark and cut-surface brush control applications, where triclopyr (“Element” 4, Garlon 4 Ultra, Remedy’ Ultra) and imazapyr (“Stalker”) are used in a premix.

**INFILTRATOR** is a unique, highly emulsified low viscosity non-aromatic/noncarcinogenic diluent with select surface-active compounds and coupling agents. The low viscosity oils and other ingredients used in **INFILTRATOR** are designed specifically for use in very cold temperatures and will perform and remain sprayable well below freezing. **INFILTRATOR** is developed specifically for basal-bark and cut-surface brush control applications, where triclopyr (“Element” 4, Garlon 4 Ultra, Remedy’ Ultra) and imazapyr (“Stalker”) are used in a premix.

**PLATINUM** is 70 percent surfactant; increases the spreading, wetting and penetration of pesticide products.

**PLATINUM** is a unique, highly emulsified low viscosity non-aromatic/noncarcinogenic diluent with select surface-active compounds and coupling agents. The low viscosity oils and other ingredients used in **PLATINUM** are designed specifically for use in very cold temperatures and will perform and remain sprayable well below freezing. **PLATINUM** is developed specifically for basal-bark and cut-surface brush control applications, where triclopyr (“Element” 4, Garlon 4 Ultra, Remedy’ Ultra) and imazapyr (“Stalker”) are used in a premix.

**PREMIER** is a superior-quality, nonionic surfactant designed to ensure the best performance of pesticides under a wide variety of conditions. The high level of surfactant, **PREMIER** contains an oil-soluble, long-lasting indicator dye. **PREMIER** can be used on industrial rights-of-way, forestry and other applications that require an oil diluent as a penetrant.

**NATURAL** is designed for basal-bark and cut-surface brush control applications with oil-soluble herbicides, such as triclopyr, that are registered for woody plant vegetation control. **NATURAL** contains an oil-soluble, long-lasting indicator dye. **NATURAL** can be used on industrial rights-of-way, forestry and other applications that require an oil diluent as a penetrant.

**SECURE ULTRA** is an effective, easy-to-use adjuvant, formulated for drift improvement and drift retardation in spraying operations. **SECURE ULTRA** is designed for general use in standard ground and aerial applications, and is fully compatible with a wide variety of spray configurations, including those with new A.I. and other specialized drift reduction nozzles. Further, **SECURE ULTRA** is compatible in tank mix applications with a broad spectrum of crop protection pesticides, including the complete range of all branded and generic glyphosate formulations.

**PLATINUM** is a temporary, water soluble, blue spray colorant - used to monitor spray applications. Indicates drift, improves applications, and helps reduce spraying of unwanted areas. **PLATINUM** may be used with foam markers, and industrial and forestry applications. Works with any type of spray equipment, either hand held, back pack, or broadcast.

**SECURE ULTRA** is a temporary, water soluble, blue spray colorant used to monitor spray applications. It indicates drift, improves applications, and helps reduce spraying of unwanted areas. It may be used with foam markers, and industrial and forestry applications. It will work with any type of spray equipment, either hand held, back pack, or broadcast.

**SUPREME** is a superior-quality, nonionic surfactant designed to ensure the best performance of pesticides under a wide variety of conditions. The high level of surfactant, **SUPREME** contains an oil-soluble, long-lasting indicator dye. **SUPREME** can be used on industrial rights-of-way, forestry and other applications that require an oil diluent as a penetrant.

**VIGOR** is a powerful, superior grade spray tank cleaner that penetrates and solubilized pesticide residues. **VIGOR** is tolerant to handling by air or ground application, and is soluble, compatible and miscible in nearly all types of spray tank materials. **VIGOR** has low foam generation and is free of volatile organic compounds (VOCs). **VIGOR** is a temporary, water soluble, blue spray colorant - used to monitor spray applications. Indicates drift, improves applications, and helps reduce spraying of unwanted areas. **VIGOR** may be used with foam markers, and industrial and forestry applications. Works with any type of spray equipment, either hand held, back pack, or broadcast.

**RADIANT** is used as a spray adjuvant to improve deposition of spray droplets. **RADIANT** improves spreading and reduces the production of fine droplets which are susceptible to movement from the spray pattern. **RADIANT** also reduces the hanging of residue spray materials will prevent damage from spraying operations. **RADIANT** improves spreading and reduces the production of fine droplets which are susceptible to movement from the spray pattern. **RADIANT** also reduces the hanging of residue spray materials will prevent damage from spraying operations. **RADIANT** is a temporary, water soluble, blue spray colorant - used to monitor spray applications. Indicates drift, improves applications, and helps reduce spraying of unwanted areas. **RADIANT** may be used with foam markers, and industrial and forestry applications. Works with any type of spray equipment, either hand held, back pack, or broadcast.
Red River Specialties, Inc. is the premier provider of herbicides in the industrial, rights-of-way, aquatic, range and pasture, and forestry markets. Red River Specialties distributes top products from leading chemical manufacturers to ensure customers have access to reliable, effective products that are scientifically proven to work. In order to provide turn-key solutions and industry-best customer service experiences, Red River Specialties employs industry experts who focus on recommending accurate treatment plans to help customers achieve the best results.
